UdaipurTimes.com-People-Achievements-Aman Ladia achieves 1st Rank in Asia in Science Olympiad

Aman Ladia achieves 1st Rank in Asia in Science and Cyber Olympiads

By UdaipurTimes Team on May 6, 2013

Dungarpur's 11-year-old Aman Ladia has secured 1st Rank in Asia in 12th NCO (National Cyber Olympiad) and 15th NSO (National Science Olympiad) Exam organized by Science Olympiad Foundation.

Aman is the first student in the history of exams conducted by Science Olympiad Foundation to achieve gold medals in two subjects out of three.

Lacs of students of 1000 cities from 14 countries in Asia competed in the examination.

Aman has made Dungarpur proud with his achievement.

Our Leadership

Tanvir Shah

Managing Director

Harvard University
Graduate School of Design
Executive Education

Tanvir has established a track record earning trust and delivering value. His work building profitable partnerships have been recognized with the Banker Middle East, Cards International and Freddie awards.

He is Managing Director of The Partnerships Consulting where he advises on successful Banking, Real Estate, FinTech and PropTech strategies.

Previously, at Abu Dhabi Islamic Bank, Tanvir launched and built one of the largest Payments & FinTech business in the region with \$ 3 Billion in annual volumes. Aman Ladia

Aman Ladia

Aman Ladia is a 15 year old inventor and entrepreneur based in Bombay, India. Aman has keen interest in blockchain and cybersecurity having also won international level cyber and mathematics competitions.

Aman's catalogue of products includes an AI-enabled power-saving home automation device and a wearable safety jacket for bikers, both of which have received awards from the Department of Industry, Innovation and Science, Government of India. Aman, as a solo competitor age 14 beat out larger, better funded and more experienced teams.

He writes regularly on popular Blockchain blogs and has delivered talks at various international conferences as a part of his effort to expand the technology to the common man.

Aman has dived into cryptography – learning vulnerability analysis by exploiting misconfigured access privileges on network nodes at his school. Since then, he has worked with other institutes, attempting to strengthen their internal systems.

As a technical architect at Blockchain Fortress, a Canadian based firm, Aman has been working toward constructing new applications for the technology, in vastly different fields: from finance to real estate to education. He views the technology as a bridge between corporations and governments. In addition to his hands-on experience with blockchain, he is also working with the R&D Department of Emirates NBD Bank to develop new Blockchain technologies.

Aman balances his tech career and interests while also attending the Dhirubhai Ambani International School in Mumbai, where he has held top position in academics all through. He has been conferred with the prestigious Homi Bhabha Young Scientist Award twice, in addition to having won over 35 zonal, national and international Olympiads and scholarships.

Empowering India Digitally

L-R: Satyajit R Vagvala; Aman Ladia; Sarvesh Singhal; R K Bahuguna

Aman Ladia, FinTech Advisor, The Partnerships Consulting, shared his insights on blockchain and information exchange – secure cross-domain data transfer using an amalgamation of blockchain and traditional technologies.

Emphasising the importance of data in the 21st century, Ladia said that the importance of personal information is like the oil of the current century. He discussed difficulties in securing data stored in traditional databases and how an attacker can modify database entries to do harm. It usually goes unnoticed, he said.

He further talked about the core concept behind blockchain and linked it with a real-world example of trade carried out between parties that do not trust each other.

He gave a series of examples, from land records and police evidence to subsidies, where blockchain can be applied. He highlighted the security profiles of each system.

Sarvesh Singhal, special secretary, IT and e-governance, Jharkhand; CEO, JAP-IT, said that knowledge which is used in a positive way becomes an opportunity. But if it is used negatively, it becomes a challenge. “E-governance

becomes the tool to deliver citizen-centric services. Jharkhand is the state where the first statewide area network was rolled out in 2006-07. In Jharkhand, all of the land data has been digitised, consisting of 53,000 terrestrial maps and record of rights and it was integrated with terrestrial maps. All registry offices have become online and because of this the state has secured 4th rank in the ease of doing business. Jharkhand tops in e-governance,” he said.

Every department has brought its own policies like startup policy, IT/ITES, ESDM policy, BPO policy, industrial policy, education policy and labour policy.

Presently, Jharkhand is the first state in labour improvement infrastructures in compliance to the labour information system which has helped it in bagging the first award in India for labour reforms. “In Jharkhand, there are over 4,000 panchayats which are going to be connected with Bharatnet project,” he revealed.

RK Bahuguna, adviser/ICT, Gurugram Metropolitan Development Authority (GDMA) & former CMD, Railtel Corporation of India Ltd, said that in order to empower India digitally, one needs a robust connectivity network to provide services to people.

Connectivity is the fundamental or basic for any application, he said.

The cycle of spending money for research and development to improve quality of life continues in every era.

“Ultimately all the developments in technologies are happening to improve the quality of life,” he said.

Satyajit R Vagvala, general manager, National Institute for Smart Government, said the society is moving towards digital governance and the kind of technological innovations that are happening on a day-to-day basis, in the government and the corporate sector, wouldn't have been possible a few years back.

“We don't have a act or legal framework which is sufficient to address the persistent changes taking place in the technology today. Technology is much more dynamic for policy to respond so policymakers must respond quickly,” he said.

He further said that so far we never had concrete institutional arrangements for dealing with technologies. “We have IT departments and they do whatever they can. There is a lot of money available with them but how do you utilise that money is the big issue for many companies,” he added.

Anuprita Daga
Chief Information Security Officer
Reliance Capital Ltd

Anuprita Daga is having overall 24+ years of experience in the industry. She is currently associated with Reliance Capital as Group Chief Information Security Officer. She has always played transformational role throughout her carrier. Her switch from IT to Information Security was one of them. She has driven many critical initiatives & played vital role in setting up Governance structure, separating governance role and Implementation role etc. Anuprita has been a part of global Information Security community and has participated in various events as speaker or panelist. She has been appreciated by industry and has been awarded as Global top 100 CISO, Top 100 CISO, Top 50 CISO and so on.

Jiten Jain
Co-Founder
Voyager Infosec Pvt. Ltd.

Jiten is heading Indian Infosec Consortium, an independent not-for-profit organization of leading ethical hackers, cyber experts and cyber security communities in India. He is also the co-founder of Voyager Infosec, a cyber-security startup specializing in anti-piracy technologies. A leading cyber security expert with specialization in geopolitical intelligence analysis and mapping them to cyber conflicts. Jiten is frequently consulted by Government of India on matters of cyber security and cyber innovations. He is also actively involved in the creation of cyber security framework for India and makes policy recommendations on regular basis. Acknowledging his authority on cyber security Amity University has conferred him Honorary Professorship. Jiten is a visiting faculty at the famed Foreign Service Institute, Ministry of External Affairs.

Aman Ladia
Blockchain Architect and Independent Cyber Security Researcher

Aman Ladia is an inventor and entrepreneur with a keen interest in blockchain and cybersecurity. He has worked as a programmer to help educational institutes and SMEs improve their efficiency and security using blockchain fundamentals. He regularly writes on popular Blockchain blogs, as a part of his effort to expand the technology to the common man. Aman's catalogue of products includes an AI-enabled power-saving home automation device and a wearable safety jacket for bikers, both of which have received awards from the Department of Industry, Innovation and Science. Aman, as a solo competitor age 14 beat out larger, better funded and more experienced teams. Having also won international level cyber and mathematics competitions, Aman dived into cryptography. This innovative jacket is called JARS, which stands for Jacket Automation for Driver's Safety. It's a unique safety jacket, which reduces the chances of a driver getting into an accident. In fact, it even prevents it! The jacket has safety features like an auto indicator system, over-speed warning, alcohol sensor, among others. It is connected to the rider's phone through Bluetooth. The auto indication system is especially unique as it automatically turns on the indicators 60m before a turn. It uses Google Maps APIs in the mobile app, which flashes the indicators stitched to the back of the jacket. The jacket makes use of conductive threads and sewable components and is powered by an Arduino microprocessor. There are no wires at all! The jacket is a perfect example of what a future safety wearable will look like. In India, an estimated 47% of bike accidents happen due to lack of turn indicators. Thousands of lives are lost every year due to bike accidents. This jacket is a cost-effective (costs less than ₹2,000) and innovative product which will help make Indian roads safer. Also, this is entirely made using components obtained from Indian sellers. It can be easily produced on a large scale to make Indian roads safer for all. This jacket was developed by Aman Ladia who in the top 3 at Techniche, 2016. Aman hails from Mumbai and is a student of Dhirubhai Ambani International School.
